

Nicholas Kaufmann

nicholasjkaufmann@gmail.com

Ashburn, Virginia

Skills

- Software Developer with focus on NodeJS/ExpressJS based applications along with professional experience maintaining security, Databases, API integration and version control (Git)
- Professional experience with AWS services and creating SLS architecture in a production environment. Some primary tools include Lambda, KMS, API Gateway, S3, SNS, Route53, ECS, EKS (AWS has so many services, and my involvement is better explained through API designs I build, rather than trying to imply daily interaction with any list... please feel free to ask for specific involvement pertaining to any skill you may desire)
- Testing [Unit, E2E...] along with tools including Mocha/Chai, Jest. I admit my discipline is lacking here and I am not the "TDD" guy that I wish I was. A lot goes on in my daily routine and I'm trying to focus more on this area.
- CI/CD workflow. While my team has a platform team, I wear a lot of hats to 'help launch our work on time.
- Primary front-end skills rely heavily on ReactJS/ES[6+], [S]CSS, pairing with webpack to take advantage of performance/core enhancements including sharding, POSTCSS, and many other utilities. I receive tickets all the time to help work on our dashboards and UI because of my prior experience, even though my main title focuses on server-side.

Experience

September 2018 - PRESENT

Asurion- *Cloud API Engineer*

- Role is NodeJS/SLS engineer, responsible for building out API's on new platform with multiple teams.
- Work on data-driven, large scale system that handles phone insurance claims. Lead projects, train fellow team members, advocate and encourage universal and consistent code practices across multiple branches of the company.

March 2016 - September 2018

Tech_Uncensored - *Front End Engineer*

- Contract/Freelance developer working with NodeJS applications and

ReactJS projects for clients.

- Worked with multiple teams to complete requirements on projects. Trained teams for integrating ReactJS and modern JavaScript standards on both server and client side.

January 2014 - March 2016

WorkExpress - *ReactJS Developer*

- Created UI for Drag and Drop System using ReactJS and Responsive Web Design on new system implementation.
- Introduced many modern practices to tools that created value to bottom line. Code-based engineers only included 2 others which created many sub-roles to fill
- Trained employees on system and handled UI inquiries.
